

Branch tape jointing kit for microducts

Ribbonet® is a concept for the installation of fiber-optic distribution networks in all types of buildings i. e. multi-storey apartment blocks, office blocks, or factory premises. The Ribbonet® technique allows fiber ribbon to be drawn into microducts by conveying them on a stream of air blown in. Ribbonet® is an ideal and cost-effective way of installing a future-proof network.

Branch tape jointing kit

This jointing kit for multiducts is intended for branching off microducts outdoor. The kit uses only vulcanized tape in combination with “all weather” tape to ensure a secure, cheap and flexible solution for branching of microducts. The kit can also be used for straight joints. There are consumable materials for about 10 closures included (depending on joint size).

The basic tool box consists of vulcanizing cloth, metallic liner, all weather tape, grounding wires with branch clamps, metal tape measure, cable knife, pair of scissors, sheath cutter, microduct cutter and instructions. A special refill kit consisting of the consumables only are also available. Microduct connectors are not included in the kit.

Jointing kit

Product no.	Denomination / Comment
NDE 451 40 / 1	Basic kit with tools
NDE 451 40 / 2	Refill kit
