

Fiber Outlet, FTTH

Ribbonet[®] is a concept for the installation of fiber-optic distribution networks in all types of buildings i. e. multi-storey apartment blocks, office blocks, or factory premises. The Ribbonet[®] technique allows fiber ribbon to be drawn into microducts by conveying them on a stream of air blown in. Ribbonet[®] is an ideal and cost-effective way of installing a future-proof network.

Fiber Outlet (FTTH)

This **wall mounted** fiber outlet is intended for the termination of optical single- or multi- mode fiber in Fiber To The Home (FTTH) applications.

The outlet compartment allows space for termination of micro-duct as well as fiber storage.

Chose between the most common standard adapters for Fiber To The Home (MTRJ or SC duplex).

The basic kit includes the base plate for wall mounting, cover with labels and transparent window, fiber guides, straps for securing the micro-duct, blind-panels, adhesive tape and screws.

Fiber outlet, FTTH
